ATLAS VISION

AI-Powered Robotics for Automotive Pre-Delivery Inspection

OUR MISSION

To revolutionize quality control with AI inspection technology

Autonomous intelligent agents that identify, categorize, and process damages and defects across the automotive supply chain

THE SOLUTION

Mobile Autonomy Powered by AI for Your Vehicle Pre-Delivery Inspection Workflows.

1. CAPTURE

Mobile, or mobile robots scan all around the vehicle.

2. DETECT

Vision agent selects models to identify defects in real time.

3. REASON

Classifier agent assesses severity & recommends actions.

4. VERIFY

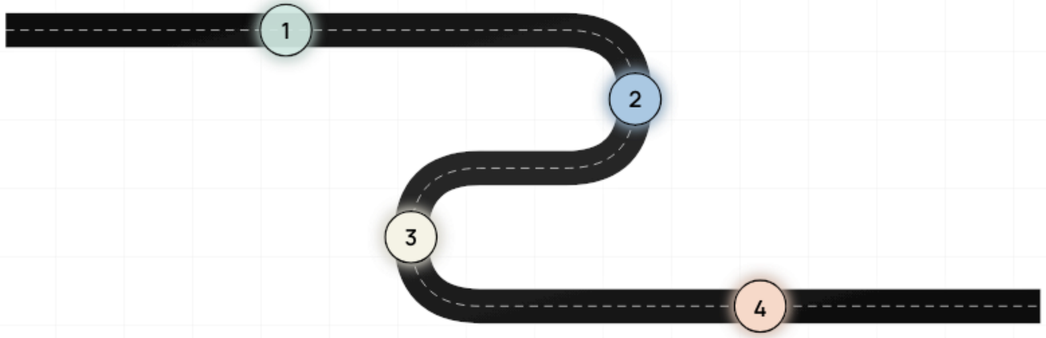
Human collaborates with AI by verifying or evaluating AI findings.

5. INTEGRATE

AI orchestrator coordinates with external systems for continuity.

PRODUCT ROADMAP

From mobile only workshop inspection to robotic fleet inspections in Vehicle Processing Centers (VPCs).



FOUNDATION MODULES THROUGHOUT ALL PHASES

Integration Management

Backward compatibility, robust API versioning, and wrappers for reliability in live deployments.

Containerized Scaling

Securely isolates each device or robot as an independent unit for maximum scalability and security.

Cost-aware Architecture

Inference gradually migrates on device to minimize bandwidth once performance is stable.

Governance Engine

Adopting robust AI Governance framework to meet regulatory requirements across use cases.

VALUE PROPOSITION

Achieve consistent customer satisfaction with measurable efficiency impact.

ACCELERATED OPERATIONS

Cut inspection time from 20+ minutes to seconds

CONSISTENT DETECTIONS

Catch misses with verified, auditable, data-driven records

LIFECYCLE SCALABILITY

Own the entire inspection workflow across supply chain

CUSTOMER SATISFACTION

Boost trust and loyalty with transparent vehicle history and faster service

SCALE WITH CONFIDENCE BUILT ON PARTNERSHIP

Human Oversight • Governance • Adoption

Autonomy built upon human intelligence

Embedded human oversight and active feedback for continuously improving AI.

Responsible Scalability with Mobile Autonomy

Cost-optimized architecture and embedded governance running on the edge or cloud.

Paradigm Shift into AI-Powered Workflows

Guided transformation to drive adoption by our team of automotive experts.
